Create my own Database
Create a schema inside the database
Create two tables within the schema
Join the two tables into one table using FULL OUTER JOIN
Data Aggregation
Create Features (Generating new columns)
EDA (Exploratory Data Analysis): Exploring the data
Data Source: Microsoft Excel (css file)
ETL(Extract, Transform and load data into databricks)
Data Ingestion: Load the CSV into the Databricks Catalog (Database)
Data Processing: Coding in SQL
Create a table from the processed data and store it into the databricks catalog
Create a Dashboard within Databricks
Extract the data into Excel for Visualization and insights generation
Create a Power BI report for continuous sales monitoring
Data Presentation: Canva
